

Connect Google Gemini to Gov BANKV

A simple, step-by-step picture guide. In about 2 minutes, you'll give Gemini live access to all 27 of your Gov BANKV government-contracting tools.

★ 5 EASY STEPS · ~2 MINUTES

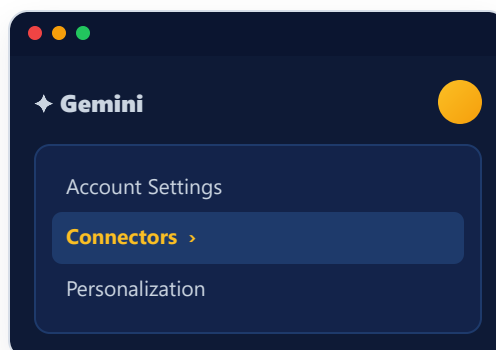

Before you start

- **A Gemini paid plan** — custom connectors require Gemini **Pro, Max, or Enterprise**.
- **Your Gov BANKV access token** — in the Gov BANKV app go to [Settings](#) → [MCP Access](#) → [Generate Access Token](#) and copy it (it's shown only once).
- **The connector address** — you'll paste this in Step 3:
<https://mrgovcon.co/all/mcp>

1 Open Gemini's Connectors

In the Gemini app, click your **profile picture** in the top-right corner, then choose **Account Settings** → **Connectors**.

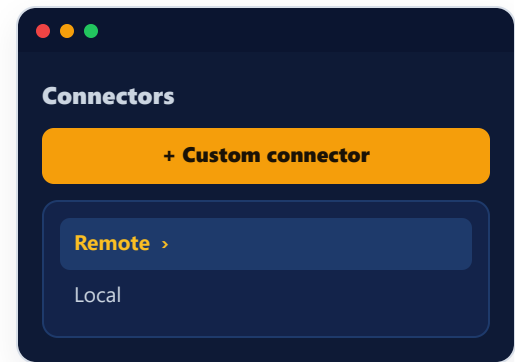

Tip: connectors live under your account, so you only set this up once.

2 Add a custom remote connector

On the Connectors page, click + **Custom connector**, then choose **Remote**.

"Remote" means it connects to Gov BANKV over the internet — nothing to install.

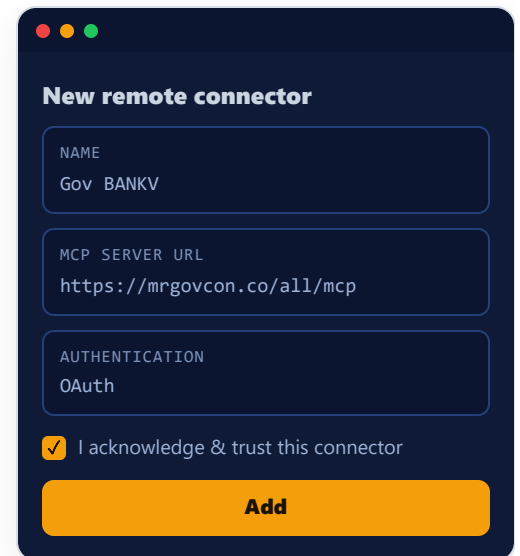

3 Enter the Gov BANKV details

Fill in the form:

- **Name:** Gov BANKV
- **MCP Server URL:** `https://mrgovcon.co/all/mcp`
- **Authentication:** choose OAuth.

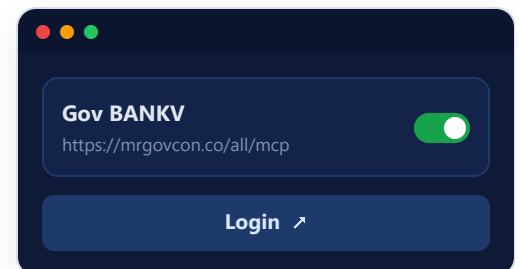

Check the **acknowledgement box**, then click **Add**.

4 Enable it & sign in

Click the new **Gov BANKV** card to turn it **on**, then click **Login** (or **Authenticate**). A Gov BANKV sign-in page opens in your browser.

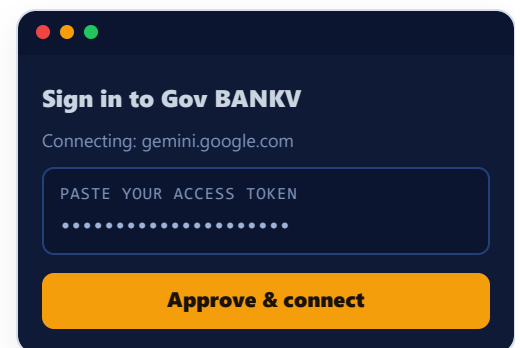

This is the one-time OAuth sign-in — Gemini never sees your password.

5 Paste your access token — done!

On the Gov BANKV sign-in page, **paste your access token** (from "Before you start") into the box and click **Approve**.

That's it — Gemini can now use all **27 Gov BANKV tools**. Try asking: "Use Gov BANKV to show my top open opportunities."

If something goes wrong

- **"Error creating connector" / redirect error:** this is fixed on our side — make sure you **delete the half-added connector and add it fresh**, then retry.
- **Needs a token / token rejected:** generate a new one in **Settings** → **MCP Access** → **Generate Access Token** and paste the latest.
- **Don't see "Custom connector":** custom connectors require a Gemini **Pro, Max, or Enterprise** plan.
